

Mutilated Pork Roast with baked apples

1 Factory farmed pig

1 Metal birthing crate/cage (2m x 0.5m)

1 Concrete / metal-slatted floor

1 Pair clippers

After birth, ensure piglet's only contact with mother is through metal bars.

Within the first week of its life, surgically mutilate piglet. Snip off tail and cut eye teeth with clippers without administering pain relief. Ignore screams. Forcibly remove from mother after 3 to 4 weeks and stuff into crowded pen. Marinate indoors for entire life. Serves 4.

In Australian factory farms, most pigs are subjected to the procedures and practices described.

You can change how they live.

If you purchase pork, bacon, or ham - choose free-range.

There's nothing appetising about Australian Factory Farmed Pork.
